Practice 6

Create and run a javaweb project using Jetty and Tomcat

1. Create a javaweb project using `maven-archetype-webapp` **using command line or IDEA.**

2. Change "hello world" to "Your student ID + name".

3. Add `Jetty` **dependency, configure its port to 9090 and context path to "CS304". Start jetty server and show us the web page as below.**

4. Add `Tomcat` **dependency, configure its port to 8899 and context path to "CS304". Start Tomcat server and show us the web page as below.**

← → C   ⓘ localhost:9090/CS304/
