[CS304] Final Delivery Grading Scheme

> Milestone3 (25) = Team report (10) + On-site demonstration (14) + Individual report (1) + *Early demo at week 15 bonus (0.5)*
>
> The bonus can be directly added up to the final grade.

Part 1. Team Report (10 points)

This report should contain 5 sections (10 = 2 + 2 + 2 + 2 + 2).

1.1 Metrics (2 points)

- Collect these five metrics of your project **(1 point, 0.2 each)**
  - Lines of Code
  - Number of modules/subprojects
  - Number of packages
  - Number of source files
  - Number of 3rd party dependencies
- Analyze the maintainability of your team project **(1 point)**
  - Approach 1
    - Collect the above five metrics of at least one popular open-source project **(0.5 points)**
    - Compare the metrics with yours, and briefly analyze the maintainability **(0.5 points)**
  - Approach 2
    - Give a *detailed and reasonable* analysis of the maintainability based on additional [statistics, graphs, snapshots...] **(1 point)**

1.2 Documentation (2 points)

Demonstrate your documentation by *(1)* attaching the GitHub URL / self-hosted doc site if applicable; *(2)* adding a few screenshots of them [mandatory]; *(3)* providing a brief description [mandatory].

- Documentation for end users **(1 point)**
- Documentation for developers **(1 point)**

1.3 Tests (2 points)

- If your project has automated tests
  - Introduce the testing tools you used, which kind of test are they used for (backend/frontend, UT/IT/E2E)? **(1 point)**
  - Source code of related artifact for testing (several screenshots & GitHub URL) **(0.5 points)**
  - Test execution results: after completing the development of the entire project, run all tests (take a screenshot), then run a coverage report (upload to repo, provide screenshot & GitHub URL) **(0.5**

points)

- If your project ONLY has manual tests
  - Explain why can't your project be automatically tested **(0.6 points)**
  - Take two *cases* as example, explain the steps and approaches used in manual testing **(1.4 points, 0.7 each)**

1.4 Build (2 points)

- The technology/tools/frameworks/approaches that you used for building the project **(0.5 points)**
- Explain the tasks executed in a build **(0.5 points)**
- Describe the final artifacts produced by a successful build (e.g. how to run the built jar) **(0.5 points)**
- Buildfile or related artifacts/scripts used for building (URL links or snapshots) **(0.5 points)**

1.5 Deployment (2 points)

- Introduce the containerization technology/tools/frameworks used in your project **(0.5 points)**
- The script or related artifacts (e.g., `Dockerfile`) used for containerization (URL links or snapshots). If your project uses multiple containers, *briefly introduce how you assigned different services into different containers* **(1 point)**
- A proof of successful containerization (e.g., a snapshot of a successful docker build, Docker Hub link, etc.) **(0.5 points)**

We may ask you to demonstrate the documentation, tests, build, and deployment process during the final presentation. Be prepared.

You may also record a short video (~5min) about the documentation, tests, build, and deployment in advance. This is **optional** though.

Part 2. Project Demonstration (14 points)

- Attendance **(0.5 points)**
- Presentation **(0.5 points)**
- Features **(10 points, 2 for each notable feature)**
- Usability **(3 points)**

Video **required** for demonstrating the features (see project doc for detailed requirements on video).

Points will be deducted if:

- No video (-2 points)
- Video is too long (-1 point)
- Video focuses on internal implementation rather than features and usability (-1 point)

Part 3. Individual Progress Report (1 point)

- How is the overall team collaboration? **(0.25 points)**
- What is your responsibility for this project? **(0.25 points)**
- What have you contributed to the project? **(0.25 points)**
- What difficulties have you encountered? **(0.25 points)**
